

Common Breast Symptoms

- Breast Lump (s)
- Breast pain
- Nipple discharge
- Nipple rash
- Armpit lump (s)

These are common complaints that can affect women and (men) of different age groups. These symptoms can cause a lot of anxiety because there is a common fear of breast cancer. So, when should patients seek help?

- When they have symptoms
- When there are incidental findings during routine health checks or on routine mammogram, even if the patient has no symptoms
- When there is a family history of breast cancer
